Finding the Right DRG;
Finding the Fair Code.

Protection Against Coding Denials
Historically, a FairCode-reviewed chart is 13 times less likely to be denied by the payor. And, when appealed, is twice as likely to have the denial overturned. But whatever the source of your coding or UM denials, FairCode can help. Our dedicated appeals team of physicians has years of experience reasoning with recalcitrant payors -- and winning.

Denial Appeal Letters Written by Experts
Think about it: who do you want crafting the argument to a fractious payor? Your attending physician? He/she knows medicine, but has no understanding of the coding rules. Your coder? He/she is an expert on coding, but is challenged to craft a clinical argument.

You want the best of both worlds: FairCode physicians, with extensive training in coding, and years of coding audit experience under their belts.

Our Advantages

- FairCode Reviewed Charts 13 Times Less Likely to Have a Payor Denial

- 73% Recovery of Denied Dollars on FairCode Reviewed Cases vs. 37% Recovery of Denied Dollars on non-FairCode Reviewed Cases

- Rate of Dollar Recovery 2 Times Higher on FairCode Reviewed Case

What We Do

FairCode combines the domain expertise of experienced physicians with modern data science and analytics technologies. We bridge the gap between your attending physicians and hospital coders. Physician-conducted medical chart reviews happen in real time, significantly impacting quality and bottom line results. Our physicians and data scientists are a part of your team. Outcomes are measurable and significant. We average a greater than 4:1 Gross Return on Investment.
